**NOTES:**

- Changing limit switch will effect dead band; See sales drawing.
- Use G limit switch for single setpoint models that need this option. When selecting the manual reset option on dual setting switches (T2H), the manual reset limit switch will be on the high circuit. The low circuit limit switch must be specified by the customer.
- Add 'S' wetted material. FX models require stainless steel capillaries. Consult factory; minimum quantities required.
- Add 'S' wetted material adder and 'A' armor adder to this. Capillary length '25' requires stainless steel capillary and armor.
- Factory preset is available for all ranges, limited to 400°F setpoint(s).
